GRADUATE UNIVERSITY

“CGU’s interdisciplinary approach to public health education will propel the field in an exciting direction, both locally and globally. As a student, you will gain a solid foundation in the core areas of global public health by addressing the dynamic behavioral, biological, social, cultural, and economic factors affecting health issues.”

—Darleen Schuster,
Director, Master of Public Health Program

The School of Community and Global Health

At the School of Community and Global Health (SCGH), we improve the health and wellness of the world through cutting-edge research and educational programs that address the dynamic behavioral, biological, social, cultural, and economic determinants affecting health outcomes.

Threats to health and well-being are complex. They include health disparities between rich and poor, climate and environmental change, and emerging and infectious disease. Unprecedented global, social, and economic change and a steep increase in noncommunicable, chronic illness contribute to the pandemic of diseases of life-style. Cardiovascular disease, obesity, diabetes, and certain cancers share similar risk factors related to unhealthy diets, sedentary behavior, substance use, risky sexual behaviors, and mental stress.

Why does Community and Global Health matter?

At CGU's SCGH, we believe that overcoming barriers to good health results from the interaction of science and community action. Evidence-based health promotion and disease prevention strategies that combine the best science, translate well to practical application, and involve the input and buy in of community members, which are essential to favorable health outcomes, harmonious lives, productivity, and peace of mind.

Enroll today! Come join our faculty of innovative researchers and leaders. Through our flexible, learner-centered transdisciplinary approach, you will help confront today's most vexing public health issues.

Through transdisciplinary collaboration across CGU's School of Community and Global Health and eight other schools, we are catalyzing a new vision of how we conceptualize and promote health that extends far beyond the scope of traditional programs and paradigms. www.cgu.edu/scgh

Master of Public Health with concentrations in:

- Health Promotion, Education, and Evaluation
- Applied Biostatistics and Epidemiology
- Leadership and Management

Doctor of Philosophy in Prevention Science

Additional dual degrees and certificate programs available

C. Anderson Johnson, PhD
Professor and Dean of the School of Community and Global Health

“We have a new vision of how to study and impact the health of the average citizen around the world. It crosses boundaries and challenges the way things have been looked at in the past to come up with new solutions to old problems and to tackle head on emerging issues at a time of unprecedented global growth.”
